

ZEISS LSM 900 with Airyscan 2

Your Next Generation Confocal for Fast and Gentle Multiplex Imaging

Hybrid seminar January 23rd, 2023, 11 - 12am

Onsite demo January 23rd - 25th, 2023

You are cordially invited to our hybrid seminar and onsite demo where you can experience the brand new developments in live cell imaging. Discover for yourself the ideal confocal microscope platform for 4D imaging with ZEISS LSM 900 combined with the new Multiplex mode for parallel pixel acquisition on Airyscan 2.

In a few hours you will learn how you can benefit from:

- Faster, better data: the new multiplex mode for parallel pixel acquisition acquires up to 4 superresolution image lines with a high signal-to-noise ratio (SNR) in a single sweep.
- Increased productivity: ZEN imaging software with Smart Setup. AI Sample Finder and Direct Processing makes your work more efficient.
- More sensitivity: A light efficient beam path and Airyscan 2 offer a unique combination of gentle super resolution and high SNR.

We kindly ask you to reserve your preferred time for demo via dirk.pacholsky@igp.uu.se.

Both group demos and individually demos will be arranged, for you to get most out of the session.

Please feel free to invite people in your network that may be interested.

We are looking forward to an interesting and inspiring seminar and demo session with you!

Your ZEISS Team
